Amendment And The October 19, 2005 Advisory Action)]
-- October 21, 2005 --

Amendments to the Claims:

This listing of the claims below will replace all prior versions and listing of claims in this application.

Listing of Claims:

CLAIMS 1-282. (CANCELED)

CLAIM 283. (PREVIOUSLY PRESENTED) A composition of matter comprising:

a first part which comprises a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and

a second part which comprises one or more non-radioactive signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more signal generating portions capable of providing a detectable signal.

CLAIM 284. (PREVIOUSLY PRESENTED) A composition of matter comprising:

a first part which comprises an analyte having one or more molecularly recognizable portions thereon;

a second part which comprises a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with said molecularly recognizable analyte portion, and a second portion comprising one or more nucleic acid sequences or segments; and

Under 37 C.F.R §1.116 (Following Their September 20, 2005 Supplemental
Amendment And The October 19, 2005 Advisory Action)]
-- October 21, 2005 --

a third part which comprises one or more non-radioactive signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion or portions on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more signal generating portions capable of providing a detectable signal.

CLAIM 285. (PREVIOUSLY PRESENTED) A composition of matter comprising:
a complex which comprises:

a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments;
and

one or more non-radioactive signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more signal generating portions capable of providing a detectable signal.

CLAIM 286. (PREVIOUSLY PRESENTED) A composition of matter comprising:
a complex which comprises:

an analyte having one or more molecularly recognizable portions thereon;
a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with said molecularly recognizable analyte portion and a second portion comprising one or more nucleic acid sequences or segments; and
one or more non-radioactive signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte,

-- October 21, 2005 --

each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more signal generating portions capable of providing a detectable signal.

CLAIM 287. (PREVIOUSLY PRESENTED) A composition of matter comprising:

a first part which comprises more than one molecular bridging entity, each such entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and

a second part which comprises one or more non-radioactive signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said more than one bridging entity nucleic acid second portion, and one or more signal generating portions capable of providing a detectable signal.

CLAIM 288. (PREVIOUSLY PRESENTED) A composition of matter comprising:

a first part which comprises an analyte having one or more molecularly recognizable portions thereon;

a second part which comprises more than one molecular bridging entity, each such entity comprising a first portion capable of recognizing and binding to or hybridizing with said molecularly recognizable analyte portion and a second portion comprising one or more nucleic acid sequences or segments; and

a third part which comprises one or more non-radioactive signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said more than one bridging entity nucleic acid

second portion, and one or more signal generating portions capable of providing a detectable signal.

CLAIM 289. (PREVIOUSLY PRESENTED) A composition of matter comprising a complex which comprises:

more than one molecular bridging entity, each such entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and

one or more non-radioactive signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said more than one bridging entity nucleic acid second portion, and one or more signal generating portions capable of providing a detectable signal.

CLAIM 290. (PREVIOUSLY PRESENTED) A composition of matter comprising a complex which comprises:

an analyte having one or more molecularly recognizable portions thereon;

more than one molecular bridging entity, each such entity comprising a first portion capable of recognizing and binding to or hybridizing with said molecularly recognizable analyte portion, and a second portion comprising one or more nucleic acid sequences or segments; and

one or more non-radioactive signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said more than one bridging entity nucleic acid second portion, and one or more signal generating portions capable of providing a detectable signal.

-- October 21, 2005 --

CLAIM 291. (PREVIOUSLY PRESENTED) A composition of matter comprising:

a first part which comprises a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and

a second part which comprises one or more non-radioactive signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more chemically modified or artificially altered polynucleotides capable of providing a detectable signal.

CLAIM 292. (PREVIOUSLY PRESENTED) A composition of matter comprising a complex which comprises:

a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and

one or more non-radioactive signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more chemically modified or artificially altered polynucleotides capable of providing a detectable signal.

-- October 21, 2005 --

CLAIM 295. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said analyte comprises a biological system.

CLAIM 296. (PREVIOUSLY PRESENTED) The composition according to claim 295, wherein said biological system comprises at least one member selected from the group consisting of a virus or a viral component thereof, and a cell or a cellular component thereof.

CLAIM 297. (PREVIOUSLY PRESENTED) The composition according to claim 296, wherein said cell or component thereof comprises a bacterium or a bacterial component thereof.

CLAIM 298. (PREVIOUSLY PRESENTED) The composition according to claim 295, wherein said biological system comprises a pathogen or a component thereof.

CLAIM 299. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said analyte is selected from the group consisting of a nucleic acid and a protein.

CLAIM 300. (PREVIOUSLY PRESENTED) The composition according to claim 299, wherein said analyte nucleic acid is selected from the group consisting of an oligo- or polyribonucleotide, an oligo- or polydeoxyribonucleotide, a poly-purine, a poly-pyrimidine, and a nucleotide analog-containing nucleic acid polymer, or any combination of the foregoing.

-- October 21, 2005 --

CLAIM 301. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said molecular bridging recognizing first portion comprises a low molecular weight organic compound.

CLAIM 302. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said molecular bridging recognizing first portion is selected from the group consisting of an antigen and an antibody.

CLAIM 303. (PREVIOUSLY PRESENTED) The composition according to claim 302, wherein said antibody comprises a polyclonal or a monoclonal antibody.

CLAIM 304. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said molecular bridging recognizing first portion is selected from the group consisting of a saccharide and a lectin.

CLAIM 305. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said molecular bridging recognizing first portion is selected from the group consisting of a hormone and a receptor therefor.

CLAIM 306. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said molecular bridging recognizing first portion is selected from the group

consisting of an enzyme, an allosteric effector, an enzyme substrate and an enzyme cofactor.

CLAIM 307. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said molecular bridging recognizing first portion is selected from the group consisting of a ligand and a receptor therefor.

CLAIM 308. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said molecular bridging recognizing first portion is selected from the group consisting of a protein and a protein receptor therefor.

CLAIM 309. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said molecular bridging recognizing first portion comprise a nucleic acid.

CLAIM 310. (PREVIOUSLY PRESENTED) The composition according to claim 309, wherein said nucleic acid comprises an oligo- or polynucleotide.

CLAIM 311. (PREVIOUSLY PRESENTED) The composition according to claim 310, wherein said oligo- or polynucleotide comprises a modified oligo- or polynucleotide.

CLAIM 312. (PREVIOUSLY PRESENTED) The composition according to claim 310 wherein said oligo- or polynucleotide comprises one or more nucleotides modified on the sugar phosphate, base, or combinations thereof.

-- October 21, 2005 --

CLAIM 313. (PREVIOUSLY PRESENTED) The composition according to claim 310, wherein said oligo- or polynucleotide is single-stranded or partially double-stranded.

CLAIM 314. (PREVIOUSLY PRESENTED) The composition according to claim 310, wherein said oligo- or polynucleotide is circular or linear.

CLAIM 315. (PREVIOUSLY PRESENTED) The composition according to claim 310, wherein said oligo- or polynucleotide is selected from the group consisting of an oligo- or polyribonucleotide, an oligo- or polydeoxyribonucleotide, a poly-purine, a poly-pyrimidine and a nucleotide analog-containing oligo- or polynucleotide, or any combination of the foregoing.

CLAIM 316. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said nucleic acid sequence or segment in the molecular bridging entity second portion comprises an oligo- or polynucleotide.

CLAIM 317. (PREVIOUSLY PRESENTED) The composition according to claim 315, wherein said oligo- or polynucleotide comprises a modified oligo- or polynucleotide.

CLAIM 318. (PREVIOUSLY PRESENTED) The composition according to claim 316, wherein said oligo- or polynucleotide comprises one or more nucleotides modified on the sugar, phosphate, base or combinations thereof.

CLAIM 319. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein

Enz-11(C2)(D1)(C2)

Pergolizzi et al.; Serial No.: 08/479,995 (Filed June 7, 1995)
Page 13 [Second Supplemental Amendment To Applicants' July 7, 2005 Amendment

Amendment And The October 19, 2005 Advisory Action)]
-- October 21, 2005 --

said nucleic acid sequences or segments in the molecular bridging entity second portion is single-stranded or partially double-stranded.

CLAIM 320. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said nucleic acid sequences or segments in the molecular bridging entity second portion is linear or circular.

CLAIM 321. (PREVIOUSLY PRESENTED) The composition according to claim 316, wherein said oligo- or polynucleotide is selected from the group consisting of an oligo- or polyribonucleotide, an oligo- or polydeoxyribonucleotide, a poly-purine, a poly-pyrimidine and a nucleotide analog-containing oligo- or polynucleotide, or any combination of the foregoing.

CLAIM 322. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said nucleic acid sequences or segments in the molecular bridging entity second portion is derived from a phage selected from the group consisting of a T even phage, a filamentous phage, an M13 phage, or, an M13 phage variant.

CLAIM 323. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said molecular bridging entity second portion comprises a nucleic acid sequence or segment of repeating low complexity.

CLAIM 324. (PREVIOUSLY PRESENTED) The composition according to claim 323, wherein said nucleic acid sequence or segment of repeating low complexity is

selected from the group consisting of a poly G or polydeoxy G, poly GT or polydeoxy GT, poly C or polydeoxy C, poly T or polydeoxy T, poly A or polydeoxy A, poly CA or polydeoxy CA, poly GA or polydeoxy GA, poly GAT or polydeoxy GAT, and poly GTA or polydeoxy GTA.

CLAIM 325. (PREVIOUSLY PRESENTED) The composition according to claim 310, wherein said molecular bridging entity first portion and said molecular bridging entity nucleic acid second portion are incapable of hybridizing to identical oligo- or polynucleotide sequences.

CLAIM 326. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said nucleic acid sequences or segments in the molecular bridging entity second portion are covalently attached to one another.

CLAIM 327. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said signalling entity nucleic acid portion comprises an oligo- or polynucleotide.

CLAIM 328. (PREVIOUSLY PRESENTED) The composition according to claim 327, wherein said signalling entity oligo- or polynucleotide is selected from the group consisting of an oligo- or polyribonucleotide, an oligo- or polydeoxyribonucleotide, a poly-purine, a poly-pyrimidine and a nucleotide analog-containing oligo- or polynucleotide, or any combination of the foregoing.

CLAIM 329. (PREVIOUSLY PRESENTED) The composition according to claim 327, wherein said oligo- or polynucleotide comprises a modified oligo- or polynucleotide.

-- October 21, 2005 --

CLAIM 330. (PREVIOUSLY PRESENTED) The composition according to claim 327, wherein said oligo- or polynucleotide comprises one or more nucleotides modified on the sugar, phosphate, base or combinations thereof.

CLAIM 331. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said signalling entity nucleic acid portion is single-stranded or partially double-stranded.

CLAIM 332. (PREVIOUSLY PRESENTED) The composition according to any of the claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said signalling entity nucleic acid portion is linear or circular.

CLAIM 333. (PREVIOUSLY PRESENTED) The composition according to claim 332, wherein said signalling entity nucleic acid portion is a polymer derived from a linear or circular nucleic acid molecule covalently attached to a signal generating portion or a signalling chemical moiety.

CLAIM 334. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said signalling entity nucleic acid portion is derived from a phage selected from the group consisting of a T even phage, a filamentous phage, and an M 13 phage, or an M13 phage variant.

CLAIM 335. (PREVIOUSLY PRESENTED) The composition according to claim 329, wherein said signalling entity modified oligo- or polynucleotide comprises a naturally occurring modified oligo- or polynucleotide.

CLAIM 336. (PREVIOUSLY PRESENTED) The composition according to claim 335, wherein said signalling entity modified oligo- or polynucleotide carries a cloned insert.

CLAIM 337. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said signalling entity nucleic acid portion comprises a nucleic acid sequence or segment of repeating low complexity.

CLAIM 338. (PREVIOUSLY PRESENTED) The composition according to claim 337, wherein said nucleic acid sequence or segment of repeating low complexity is selected from the group consisting of a poly G or polydeoxy G, poly GT or polydeoxy GT, poly C or polydeoxy C, poly T or polydeoxy T, poly A or polydeoxy A, poly CA or polydeoxy CA, poly GA or polydeoxy GA, poly GAT or polydeoxy GAT, and poly GTA or polydeoxy GTA.

CLAIM 339. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said signal generating portion or said one or more chemically modified or artificially altered polynucleotides are capable of directly providing a detectable signal.

-- October 21, 2005 --

CLAIM 340. (PREVIOUSLY PRESENTED) The composition according to claim 339, wherein said direct signal providing signal generating portion comprises a radioactive compound.

CLAIM 341. (PREVIOUSLY PRESENTED) The composition according to claim 339, wherein said direct signal providing signal generating portion is selected from the group consisting of a fluorogenic compound, a phosphorescent compound, a chromogenic compound, a chemiluminescent compound and an electron dense compound.

CLAIM 342. (PREVIOUSLY PRESENTED) The composition according to claim 339, wherein said direct signal providing signal generating portion comprises an enzyme.

CLAIM 343. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said signal generating portion or said one or more chemically modified or artificially altered polynucleotides are indirectly capable of indirectly providing a detectable signal.

CLAIM 344. (PREVIOUSLY PRESENTED) The composition according to claim 343, wherein said indirect signal providing signal generating portion is selected from the group consisting of an antibody, an antigen, a hapten, a receptor, a ligand and an enzyme.

CLAIM 345. (PREVIOUSLY PRESENTED) The composition according to claim 343, wherein said indirect signal providing signal generating portion comprises a polynucleotide sequence capable of recognizing a signal-containing moiety.

-- October 21, 2005 --

CLAIM 346. (PREVIOUSLY PRESENTED) The composition according to claim 343, wherein said indirect signal providing signal generating portion comprises a compound capable of binding to an insoluble phase.

CLAIM 347. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein said signal generating portion or said one or more chemically modified or artificially altered polynucleotides are capable of being detected by a member selected from the group consisting of an enzymatic measurement, a fluorescent measurement, a phosphorescent measurement, a chemiluminescent measurement, a colorimetric measurement, a microscopic measurement, an electron density measurement, and a radioactive measurement.

CLAIM 348. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein the ratio of the nucleic acid sequences or segments in the second portion to the first portion of the molecular bridging entity is greater than 5.

CLAIM 349. (PREVIOUSLY PRESENTED) The composition according to claim 348, wherein the ratio is greater than 10.

CLAIM 350. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein the ratio of the signal generating portions or the one or more chemically modified or artificially altered polynucleotides to the nucleic acid portion in any or all of the signalling entities is greater than 1.

Pergolizzi et al.; Serial No.: 08/479,995 (Filed June 7, 1995)
Page 19 [Second Supplemental Amendment To Applicants' July 7, 2005 Amendment
Under 37 C.F.R §1.116 (Following Their September 20, 2005 Supplemental
Amendment And The October 19, 2005 Advisory Action)]
— October 21, 2005 --

CLAIM 351. (PREVIOUSLY PRESENTED) The composition according to claim 350,
wherein the ratio is greater than 5.

CLAIM 352. (PREVIOUSLY PRESENTED) The composition according to claim 351,
wherein the ratio is greater than 10.

CLAIM 353. (PREVIOUSLY PRESENTED) The composition according to any of
claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein
both the ratio of the nucleic acid sequences or segments in the second portion to
the first portion of the molecular bridging entity is greater than 1, and the ratio of
the signal generating portions or the one or more chemically modified or artificially
altered polynucleotides to the nucleic acid portion in any or all of the signalling
entities are greater than 1.

CLAIM 354. (PREVIOUSLY PRESENTED) The composition according to claim 353,
wherein one or both ratios are greater than 5.

CLAIM 355. (PREVIOUSLY PRESENTED) The composition according to claim 354,
wherein one or both ratios are greater than 10.

CLAIM 356. (PREVIOUSLY PRESENTED) The composition according to any of
claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein
the ratio of signalling entities to molecular bridging entity is greater than 5.

CLAIM 357. (PREVIOUSLY PRESENTED) The composition according to claim 356,
wherein the ratio is greater than 10.

-- October 21, 2005 --

CLAIM 358. (PREVIOUSLY PRESENTED) The composition according to any of claims 284, 286, 288, 290, 293 or 294, wherein the analyte is immobilized.

CLAIM 359. (PREVIOUSLY PRESENTED) The composition according to any of claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein the molecular bridging entity is immobilized.

CLAIM 360. (PREVIOUSLY PRESENTED) An article of manufacture comprising:
a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and
more than one non-radioactive signalling entity, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity second portion nucleic acid sequences or segments, and one or more signal generating portions, each capable of providing a detectable signal.

CLAIM 361. (PREVIOUSLY PRESENTED) An article of manufacture comprising:
a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and
more than one non-radioactive signalling entity, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity second portion nucleic acid sequences or segments, and one or more polynucleotides which have been chemically modified or artificially altered.

-- October 21, 2005 --

CLAIM 362. (PREVIOUSLY PRESENTED) The article of manufacture according to claims 360 or 361, further comprising the analyte.

CLAIM 363. (CANCELED)

CLAIM 364. (PREVIOUSLY PRESENTED) The process according to claims 443, 445 or 447 characterized in that said forming step comprises contacting said analyte with said bridging entity to form a first complex and thereafter contacting the first complex with said signalling entity to form said complex recited in said forming step.

CLAIM 365. (PREVIOUSLY PRESENTED) The process according to claims 443, 445 or 447, characterized in that said forming step comprises contacting said bridging entity with said signalling entity under conditions sufficient to form a first complex and thereafter contacting the first complex with said analyte under conditions sufficient to form said complex recited in said forming step.

CLAIMS 366-381. (CANCELED)

CLAIM 382. (PREVIOUSLY PRESENTED) The process according to claims 449, 451 or 453, characterized in that said forming step comprises contacting said analyte with said bridging entity to form a first complex and thereafter contacting the first complex with said signalling entity to form said complex recited in said forming step.

CLAIM 404. (PREVIOUSLY PRESENTED) The process according to claim 401,
further comprising one or more washing steps prior to detection.

CLAIM 405. (CANCELED)

CLAIM 406. (PREVIOUSLY PRESENTED) The process according to claim 459,
characterized in that said forming step comprises contacting said fixed or
immobilized analyte with said bridging entity to form a first complex and thereafter
contacting the first complex with said signalling entity to form said complex
comprising said composition and said analyte recited in said forming step.

CLAIM 407. (PREVIOUSLY PRESENTED) The process according to claim 459
characterized in that said forming step comprises contacting said bridging entity
with said signalling entity under conditions sufficient to form a first complex and
thereafter contacting the fixed or immobilized analyte with the first complex under
conditions sufficient to form said complex comprising said composition and said
analyte recited in said forming step.

CLAIM 408. (CANCELED)

CLAIM 409. (PREVIOUSLY PRESENTED) The process according to claim 406,
further comprising one or more washing steps prior to detection.

CLAIM 410. (PREVIOUSLY PRESENTED) The process according to claim 407,
further comprising one or more washing steps prior to detection.

CLAIM 411. (PREVIOUSLY PRESENTED) A kit for the detection in a sample of an analyte having one or more molecularly recognizable portions thereon, comprising as components thereof:

(i) a container carrying a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with said molecularly recognizable portion on said analyte, and a second portion comprising one or more nucleic acid sequences or segments; and

(ii) a container carrying more than one non-radioactive signalling entity, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity second portion nucleic acid sequence or segment, and one or more signal generating portions, each such portion being capable of providing a detectable signal.

CLAIM 412. (PREVIOUSLY PRESENTED) A kit for the detection in a sample of an analyte having one or more molecularly recognizable portions thereon, comprising as components thereof:

a container carrying a complex which comprises:

a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with said molecularly recognizable portion, and a second portion comprising one or more nucleic acid sequences or segments; and

more than one non-radioactive signalling entity, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity second portion, and one or more signal generating portions, each such portion being capable of providing a detectable signal.

and said molecular bridging entity nucleic acid second portion are incapable of hybridizing to identical oligo- or polynucleotide sequences.

CLAIM 442. (PREVIOUSLY PRESENTED) A process for detecting an analyte having one or more molecularly recognizable portions thereon, comprising:
providing the composition of claim 462;
forming a complex comprising said composition and said analyte; and
detecting said analyte by a signal provided by said signal generating portion or portions present in said complex.

CLAIM 443. (PREVIOUSLY PRESENTED) A process for detecting an analyte having one or more molecularly recognizable portions thereon, comprising:
providing a composition of matter comprising:
a first part which comprises a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and
a second part which comprises one or more signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more signal generating portions capable of providing a detectable signal;
forming a complex comprising said composition and said analyte; and
detecting said analyte by a signal provided by said signal generating portion or portions present in said complex.

-- October 21, 2005 --

CLAIM 444. (PREVIOUSLY PRESENTED) A process for detecting an analyte having one or more molecularly recognizable portions thereon, comprising:
providing a composition of matter comprising a complex which comprises:
a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments;
and
one or more signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more signal generating portions capable of providing a detectable signal;
forming a complex comprising said composition and said analyte; and
detecting said analyte by a signal provided by said signal generating portion or portions present in said complex.

CLAIM 445. (PREVIOUSLY PRESENTED) A process for detecting an analyte having one or more molecularly recognizable portions thereon, comprising:
providing a composition of matter comprising:
a first part which comprises more than one molecular bridging entity, each such entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and
a second part which comprises one or more signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of

hybridizing with said more than one bridging entity nucleic acid second portion, and
one or more signal generating portions capable of providing a detectable signal; and
forming a complex comprising said composition and said analyte; and
detecting said analyte by a signal provided by said signal generating, portion
or portions present in said complex.

CLAIM 446. (PREVIOUSLY PRESENTED) A process for detecting an analyte
having one or more molecularly recognizable portions thereon, comprising:

providing a composition of matter comprising a complex which comprises:

more than one molecular bridging entity, each such entity comprising a first
portion capable of recognizing and binding to or hybridizing with a molecularly
recognizable portion on an analyte, and a second portion comprising one or more
nucleic acid sequences or segments; and

one or more signalling entities substantially incapable of binding to or
hybridizing with the molecularly recognizable portion on said analyte, each such
entity comprising a nucleic acid portion capable of hybridizing with said more than
one bridging entity nucleic acid second portion, and one or more signal generating
portions capable of providing a detectable signal;

forming a complex comprising said composition and said analyte; and

detecting said analyte by a signal provided by said signal generating portion
or portions present in said complex.

CLAIM 447. (PREVIOUSLY PRESENTED) A process for detecting an analyte
having one or more molecularly recognizable portions thereon, comprising:

providing a composition of matter comprising:

a first part which comprises a molecular bridging entity comprising a first
portion capable of recognizing and binding to or hybridizing with a molecularly

recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and

a second part which comprises one or more signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more chemically modified or artificially altered polynucleotides capable of providing a detectable signal;

forming a complex comprising said composition and said analyte; and

detecting said analyte by a signal provided by said signal generating portion or portions present in said complex.

CLAIM 448. (PREVIOUSLY PRESENTED) A process for detecting an analyte having one or more molecularly recognizable portions thereon, comprising:

providing a composition of matter comprising a complex which comprises:

a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and

one or more signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more chemically modified or artificially altered polynucleotides capable of providing a detectable signal;

CLAIM 449. (PREVIOUSLY PRESENTED) A process for detecting an analyte having one or more molecularly recognizable portions thereon, comprising:

providing a composition of matter comprising:

a first part which comprises an analyte having one or more molecularly recognizable portions thereon;

a second part which comprises a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with said molecularly recognizable analyte portion, and a second portion comprising one or more nucleic acid sequences or segments; and

a third part which comprises one or more signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion or portions on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more signal generating portions capable of providing a detectable signal;

forming a complex comprising the components of said composition and said analyte; and

detecting said analyte by a signal provided by said signal generating portion or portions present in said complex.

CLAIM 450. (PREVIOUSLY PRESENTED) A process for detecting an analyte having one or more molecularly recognizable portions thereon, comprising:

providing a composition of matter comprising a complex which comprises:

an analyte having one or more molecularly recognizable portions thereon;

a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with said molecularly recognizable analyte portion and a second portion comprising one or more nucleic acid sequences or segments; and

Enz-11(C2)(D1)(C2)

-- October 21, 2005 --

one or more signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more signal generating portions capable of providing a detectable signal;

forming a complex comprising the components of said composition and said analyte; and

detecting said analyte by a signal provided by said signal generating portion or portions present in said complex.

CLAIM 451. (PREVIOUSLY PRESENTED) A process for detecting an analyte having one or more molecularly recognizable portions thereon, comprising:

providing a composition of matter comprising:

a first part which comprises an analyte having one or more molecularly recognizable portions thereon;

a second part which comprises more than one molecular bridging entity, each such entity comprising a first portion capable of recognizing and binding to or hybridizing with said molecularly recognizable analyte portion and a second portion comprising one or more nucleic acid sequences or segments; and

a third part which comprises one or more signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said more than one bridging entity nucleic acid second portion, and one or more signal generating portions capable of providing a detectable signal;

forming a complex comprising the components of said composition and said analyte; and

Amendment And The October 19, 2005 Advisory Action)]
-- October 21, 2005 --

detecting said analyte by a signal provided by said signal generating portion
or portions present in said complex.

CLAIM 452. (PREVIOUSLY PRESENTED) A process for detecting an analyte
having one or more molecularly recognizable portions thereon, comprising:

- providing a composition of matter comprising a complex which comprises:
 - an analyte having one or more molecularly recognizable portions thereon;
 - more than one molecular bridging entity, each such entity comprising a first
portion capable of recognizing and binding to or hybridizing with said molecularly
recognizable analyte portion and a second portion comprising one or more nucleic
acid sequences or segments; and

- one or more signalling entities substantially incapable of binding to or
hybridizing with the molecularly recognizable portion on said analyte, each such
entity comprising a nucleic acid portion capable of hybridizing with said more than
one bridging entity nucleic acid second portion, and one or more signal generating
portions capable of providing a detectable signal;

- forming a complex comprising the components of said composition and said
analyte; and

- detecting said analyte by a signal provided by said signal generating portion
or portions present in said complex.

CLAIM 453. (PREVIOUSLY PRESENTED) A process for detecting an analyte
having one or more molecularly recognizable portions thereon, comprising:

- providing a composition of matter comprising:
 - a first part which comprises an analyte having one or more molecularly
recognizable portions thereon;

Enz-11(C2)(D1)(C2)

Pergolizzi et al.; Serial No.: 08/479,995 (Filed June 7, 1995)

-- October 21, 2005 --

entity nucleic acid second portion, and one or more chemically modified or
artificially altered polynucleotides capable of providing a detectable signal;
forming a complex comprising the components of said composition and said
analyte; and
detecting said analyte by a signal provided by said signal generating portion
or portions present in said complex.

CLAIM 455. (PREVIOUSLY PRESENTED) A process for detecting an analyte
having one or more molecularly recognizable portions thereon, comprising:

providing a composition which comprises:

a first part which comprises a molecular bridging entity comprising a first
portion capable of recognizing and binding to or hybridizing with a molecularly
recognizable portion on an analyte, and a second portion comprising one or more
nucleic acid sequences or segments; and

a second part which comprises one or more signalling entities substantially
incapable of binding to or hybridizing with the molecularly recognizable portion on
said analyte, each such entity comprising a nucleic acid portion capable of
hybridizing with said bridging entity nucleic acid second portion, and one or more
signal generating portions capable of providing a detectable signal;

fixing or immobilizing said analyte or a sample containing said analyte to a
solid support;

forming a complex comprising, said composition and said analyte; and

detecting said analyte by a signal provided by said signal generating portion
or portions present in said complex.

CLAIM 456. (PREVIOUSLY PRESENTED) A process for detecting an analyte
having one or more molecularly recognizable portions thereon, comprising:

Enz-11(C2)(D1)(C2)

Pergolizzi et al.; Serial No.: 08/479,995 (Filed June 7, 1995)
Page 40 [Second Supplemental Amendment To Applicants' July 7, 2005 Amendment
Under 37 C.F.R §1.116 (Following Their September 20, 2005 Supplemental
Amendment And The October 19, 2005 Advisory Action)]
-- October 21, 2005 --

providing a composition of matter comprising a complex which comprises:
a molecular bridging entity comprising a first portion capable of recognizing and
binding to or hybridizing with a molecularly recognizable portion on an analyte, and
a second portion comprising one or more nucleic acid sequences or segments; and
one or more signalling entities substantially incapable of binding to or hybridizing
with the molecularly recognizable portion on said analyte, each such entity
comprising a nucleic acid portion capable of hybridizing with said bridging entity
nucleic acid second portion, and one or more signal generating portion capable of
providing a detectable signal;

fixing or immobilizing said analyte or a sample containing said analyte to a
solid support;

forming a complex comprising said composition and said analyte; and
detecting said analyte by a signal provided by said signal generating portion or
portions present in said complex.

CLAIM 457. (PREVIOUSLY PRESENTED) A process for detecting an analyte
having one or more molecularly recognizable portions thereon, comprising:

providing a composition comprising:

a first part which comprises more than one molecular bridging entity, each
such entity comprising a first portion capable of recognizing and binding to or
hybridizing with a molecularly recognizable portion on an analyte, and a second
portion comprising one or more nucleic acid sequences or segments; and

a second part which comprises one or more signalling entities substantially
incapable of binding to or hybridizing with the molecularly recognizable portion on
said analyte, each such entity comprising a nucleic acid portion capable of
hybridizing with said more than one bridging entity nucleic acid second portion, and
one or more signal generating portions capable of providing a detectable signal;

Enz-11(C2)(D1)(C2)

Pergolizzi et al.; Serial No.: 08/479,995 (Filed June 7, 1995)
Page 41 [Second Supplemental Amendment To Applicants' July 7, 2005 Amendment
Under 37 C.F.R §1.116 (Following Their September 20, 2005 Supplemental
Amendment And The October 19, 2005 Advisory Action)]
-- October 21, 2005 --

fixing or immobilizing said analyte or a sample containing said analyte to a solid support;

forming a complex comprising said composition and said analyte; and
detecting said analyte by a signal provided by said signal generating portion or portions present in said complex.

CLAIM 458. (PREVIOUSLY PRESENTED) A process for detecting an analyte having one or more molecularly recognizable portions thereon, comprising:

providing a composition comprising:

more than one molecular bridging entity, each such entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and

one or more signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said more than one bridging entity nucleic acid second portion, and one or more signal generating portions capable of providing a detectable signal;

fixing or immobilizing said analyte or a sample containing said analyte to a solid support;

forming a complex comprising said composition and said analyte; and

detecting said analyte by a signal provided by said signal generating portion or portions present in said complex.

CLAIM 459. (PREVIOUSLY PRESENTED) A process for detecting an analyte having one or more molecularly recognizable portions thereon, comprising:

Enz-11(C2)(D1)(C2)

Pergolizzi et al.; Serial No.: 08/479,995 (Filed June 7, 1995)
Page 42 [Second Supplemental Amendment To Applicants' July 7, 2005 Amendment
Under 37 C.F.R §1.116 (Following Their September 20, 2005 Supplemental
Amendment And The October 19, 2005 Advisory Action)]
-- October 21, 2005 --

fixing or immobilizing said analyte or a sample containing said analyte to a solid support;

providing a composition comprising:

a first part which comprises a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and

a second part which comprises one or more signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more chemically modified or artificially altered polynucleotides capable of providing a detectable signal;

forming a complex comprising said composition and said analyte; and

detecting said analyte by a signal provided by means of said signal generating portion or portions present in said complex.

CLAIM 460. (PREVIOUSLY PRESENTED) A process for detecting an analyte having one or more molecularly recognizable portions thereon, comprising:

fixing or immobilizing said analyte or a sample containing said analyte to a solid support;

providing a composition comprising a complex which comprises:

a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and

one or more signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such

-- October 21, 2005 --

entity comprising a nucleic acid portion capable of hybridizing with said bridging
entity nucleic acid second portion, and one or more chemically modified or
artificially altered polynucleotides capable of providing a detectable signal;
forming a complex comprising said composition and said analyte; and
detecting said analyte by a signal provided by means of said signal
generating portion or portions present in said complex.

CLAIM 461. (PREVIOUSLY PRESENTED) The composition according to any of
claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein
said signal generating portion or said one or more chemically modified or artificially
altered polynucleotides are capable of being detected by a binding member in an
insoluble phase.

CLAIM 462. (PREVIOUSLY PRESENTED) The composition according to any of
claims 283, 284, 286, 287, 288, 289, 291, 292, 293 or 294, wherein the nucleic
acid in said molecular bridging entity recognizing first portion and said molecular
bridging entity nucleic acid second portion are incapable of hybridizing to identical
oligo- or polynucleotide sequences.

CLAIM 463. (PREVIOUSLY PRESENTED) The composition according to any of
claims 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293 or 294, wherein
said molecular bridging entity comprises a polymer selected from the group
consisting of a nucleic acid-protein polymer, a nucleic acid-polypeptide polymer, a
nucleic acid-polysaccharide polymer and a polypeptide-polysaccharide polymer, said
polymer comprising one or more chemically modified purines, one or more
chemically modified pyrimidines, one or more chemically modified sugar moieties,

ligand, an enzyme, a polynucleotide sequence capable of recognizing a
signal-containing moiety, and a compound capable of binding to an insoluble phase.

CLAIM 468. (PREVIOUSLY PRESENTED) A composition of matter comprising:

a first part which comprises more than one molecular bridging entity, each
such entity comprising a first portion capable of recognizing and binding to or
hybridizing with a molecularly recognizable portion on an analyte, said analyte
molecularly recognizable portion comprising a biological system selected from the
group consisting of a virus or a viral component thereof and a cell or a cellular
component thereof, said cell or cellular component thereof comprising a bacterium
or a bacterial component thereof, said first portion being selected from the group
consisting of an antigen, a polyclonal or a monoclonal antibody, a hormone, a
receptor, an enzyme, an allosteric effector, an enzyme substrate, an enzyme
cofactor, a protein and a protein receptor, and a second portion comprising one or
more nucleic acid sequences or segments; and

a second part which comprises one or more non-radioactive signalling
entities substantially incapable of binding to or hybridizing with the molecularly
recognizable portion on said analyte, each such entity comprising a nucleic acid
portion capable of hybridizing with said more than one bridging entity nucleic acid
second portion, and one or more signal generating portions capable of directly or
indirectly providing a detectable signal, said direct signal providing signal generating
portion being selected from the group consisting of a fluorogenic compound, a
phosphorescent compound, a chromogenic compound, a chemiluminescent
compound, an electron dense compound, an enzyme, and said indirect signal
providing signal generating portion being selected from the group consisting of an
antibody, an antigen, a hapten, a receptor, a ligand, an enzyme, a polynucleotide

ligand, an enzyme, a polynucleotide sequence capable of recognizing a signal-containing moiety, and a compound capable of binding to an insoluble phase.

CLAIM 472. (PREVIOUSLY PRESENTED) A composition of matter comprising:

a first part which comprises a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, said analyte molecularly recognizable portion comprising a biological system selected from the group consisting of a virus or a viral component thereof and a cell or a cellular component thereof, said cell or cellular component thereof comprising a bacterium or a bacterial component thereof, said first portion being selected from the group consisting of an antigen, a polyclonal or a monoclonal antibody, a hormone, a receptor, an enzyme, an allosteric effector, an enzyme substrate, an enzyme cofactor, a protein and a protein receptor, and a second portion comprising one or more nucleic acid sequences or segments; and

a second part which comprises one or more non-radioactive signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more chemically modified or artificially altered polynucleotides capable of directly or indirectly providing a detectable signal, said direct signal providing signal generating portion being selected from the group consisting of a fluorogenic compound, a phosphorescent compound, a chromogenic compound, a chemiluminescent compound, an electron dense compound, an enzyme, and said indirect signal providing signal generating portion being selected from the group consisting of an antibody, an antigen, a hapten, a receptor, a ligand, an enzyme, a

polynucleotide sequence capable of recognizing a signal-containing moiety, and a compound capable of binding to an insoluble phase.

CLAIM 473. (PREVIOUSLY PRESENTED) A composition of matter comprising:
a complex which comprises:

a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, said analyte molecularly recognizable portion comprising a biological system selected from the group consisting of a virus or a viral component thereof and a cell or a cellular component thereof, said cell or cellular component thereof comprising a bacterium or a bacterial component thereof, said first portion being selected from the group consisting of an antigen, a polyclonal or a monoclonal antibody, a hormone, a receptor, an enzyme, an allosteric effector, an enzyme substrate, an enzyme cofactor, a protein and a protein receptor, and a second portion comprising one or more nucleic acid sequences or segments; and

one or more non-radioactive signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more chemically modified or artificially altered polynucleotides capable of directly or indirectly providing a detectable signal, said direct signal providing signal generating portion being selected from the group consisting of a fluorogenic compound, a phosphorescent compound, a chromogenic compound, a chemiluminescent compound, an electron dense compound, an enzyme, and said indirect signal providing signal generating portion being selected from the group consisting of an antibody, an antigen, a hapten, a receptor, a ligand, an enzyme, a polynucleotide sequence capable of

recognizing a signal-containing moiety, and a compound capable of binding to an insoluble phase.

CLAIM 474. (PREVIOUSLY PRESENTED) A composition of matter comprising:

a first part which comprises an analyte having one or more molecularly recognizable portions thereon, said analyte molecularly recognizable portion comprising a biological system selected from the group consisting of a virus or a viral component thereof and a cell or a cellular component thereof, said cell or cellular component thereof comprising a bacterium or a bacterial component thereof;

a second part which comprises a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, said first portion being selected from the group consisting of an antigen, a polyclonal or a monoclonal antibody, a hormone, a receptor, an enzyme, an allosteric effector, an enzyme substrate, an enzyme cofactor, a protein and a protein receptor, and a second portion comprising one or more nucleic acid sequences or segments; and

a third part which comprises one or more non-radioactive signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more chemically modified or artificially altered polynucleotides capable of directly or indirectly providing a detectable signal, said direct signal providing signal generating portion being selected from the group consisting of a fluorogenic compound, a phosphorescent compound, a chromogenic compound, a chemiluminescent compound, an electron dense compound, an enzyme, and said indirect signal providing signal generating portion being selected from the group

consisting of an antibody, an antigen, a hapten, a receptor, a ligand, an enzyme, a polynucleotide sequence capable of recognizing a signal-containing moiety, and a compound capable of binding to an insoluble phase.

CLAIM 475. (PREVIOUSLY PRESENTED) A composition of matter comprising:
a complex which comprises:

an analyte having one or more molecularly recognizable portions thereon;
a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, said analyte molecularly recognizable portion comprising a biological system selected from the group consisting of a virus or a viral component thereof and a cell or a cellular component thereof, said cell or cellular component thereof comprising a bacterium or a bacterial component thereof, said first portion being selected from the group consisting of an antigen, a polyclonal or a monoclonal antibody, a hormone, a receptor, an enzyme, an allosteric effector, an enzyme substrate, an enzyme cofactor, a protein and a protein receptor, and a second portion comprising one or more nucleic acid sequences or segments; and

one or more non-radioactive signalling entities substantially incapable of binding to or hybridizing with the molecularly recognizable portion on said analyte, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more chemically modified or artificially altered polynucleotides capable of directly or indirectly providing a detectable signal, said direct signal providing signal generating portion being selected from the group consisting of a fluorogenic compound, a phosphorescent compound, a chromogenic compound, a chemiluminescent compound, an electron dense compound, an enzyme, and said indirect signal providing signal generating portion being selected from the group consisting of an antibody, an antigen, a

hapten, a receptor, a ligand, an enzyme, a polynucleotide sequence capable of recognizing a signal-containing moiety, and a compound capable of binding to an insoluble phase.

CLAIM 476. (PREVIOUSLY PRESENTED) The composition according to any of claims 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474 or 475, wherein said nucleic acid sequences or segments in the molecular bridging entity second portion, or said signalling entity nucleic acid portion, or both, are derived from the group consisting of a T even phage, a filamentous phage, and a M13 phage or an M13 phage variant.

CLAIM 477. (PREVIOUSLY PRESENTED) The composition according to any of claims 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474 or 475, wherein the ratio of the nucleic acid sequences or segments in the second portion to the first portion of the molecular bridging entity is selected from the group consisting of a number greater than 5 and a number greater than 10, and wherein the ratio of the signal generating portions or the one or more chemically modified or artificially altered polynucleotides to the nucleic acid portion in any or all of the signalling entities is selected from the group consisting of a number greater than 5 and a number greater than 10.

CLAIM 478. (PREVIOUSLY PRESENTED) The composition according to claim 477, wherein both the ratio of the nucleic acid sequences or segments in the second portion to the first portion of the molecular bridging entity, and the ratio of the signal generating portions or the one or more chemically modified or artificially altered polynucleotides to the nucleic acid portion in any or all of the signalling

entities is selected from the group consisting of a number greater than 1, a number greater than 5 and a number greater than 10.

CLAIM 479. (PREVIOUSLY PRESENTED) A kit for the detection in a sample of an analyte having one or more molecularly recognizable portions thereon, comprising as components thereof:

(i) a container carrying a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with said molecularly recognizable portion on said analyte, and a second portion comprising one or more nucleic acid sequences or segments; and

a container carrying more than one non-radioactive signalling entity, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity second portion nucleic acid sequence or segment, and one or more signal generating portions, each such portion being capable of providing a detectable signal;

wherein the ratio of the nucleic acid sequences or segments in the second portion to the first portion of the molecular bridging entity is selected from a number greater than 5 and a number greater than 10; or

wherein both the ratio of the nucleic acid sequences or segments in the second portion to the first portion of the molecular bridging entity and the ratio of the signal generating portions to the nucleic acid portion in any or all of the signalling entities is selected from a number greater than 1, a number greater than 5 and a number greater than 10.

CLAIM 480. (PREVIOUSLY PRESENTED) A kit for the detection in a sample of an analyte having one or more molecularly recognizable portions thereon, comprising as components thereof:

-- October 21, 2005 --

CLAIM 484. (PREVIOUSLY PRESENTED) A kit for the detection in a sample of an analyte having one or more molecularly recognizable portions thereon, comprising as components thereof:

a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte, and a second portion comprising one or more nucleic acid sequences or segments; and

more than one non-radioactive signalling entity, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid second portion, and one or more polynucleotides which have been chemically modified or artificially altered;

wherein the ratio of the nucleic acid sequences or segments in the second portion to the first portion of the molecular bridging entity is selected from a number greater than 5 and a number greater than 10; or

wherein one or both the ratio of the nucleic acid sequences or segments in the second portion to the first portion of the molecular bridging entity and the ratio of the one or more chemically modified or artificially altered polynucleotides to the nucleic acid portion in any or all of the signalling entities is selected from a number greater than 1, a number greater than 5 and a number greater than 10.

CLAIM 485. (PREVIOUSLY PRESENTED) A kit for the detection in a sample of an analyte having one or more molecularly recognizable portions thereon, comprising as components thereof:

a complex which comprises:

a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with a molecularly recognizable portion on an analyte,

and a second portion comprising one or more nucleic acid sequences or segments;
and

more than one non-radioactive signalling entity, each such entity comprising
a nucleic acid portion capable of hybridizing with said bridging entity nucleic acid
second portion to form a polynucleotide hybrid, and one or more polynucleotides
which have been chemically modified or artificially altered;

wherein the ratio of the nucleic acid sequences or segments in the second
portion to the first portion of the molecular bridging entity is selected from a
number greater than 5 and a number greater than 10; or

wherein one or both the ratio of the nucleic acid sequences or segments in
the second portion to the first portion of the molecular bridging entity and the ratio
of the one or more chemically modified or artificially altered polynucleotides to the
nucleic acid portion in any or all of the signalling entities is selected from a number
greater than 1, a number greater than 5 and a number greater than 10.

CLAIM 486. (PREVIOUSLY PRESENTED) The kit of any of claims 479, 480, 481,
482 or 483, wherein said signal generating portion is carried in a separate container
from the container carrying the signalling entity comprising a nucleic acid portion
capable of hybridizing with said bridging entity nucleic acid second portion.

CLAIM 487. (PREVIOUSLY PRESENTED) The kit of claims 484 or 485, wherein
said one or more chemically modified or artificially altered polynucleotides are
carried in a separate container from the container carrying the signalling entity
comprising a nucleic acid portion capable of hybridizing with said bridging entity
nucleic acid second portion.

CLAIM 542. (PREVIOUSLY PRESENTED) The composition of claim 283, wherein said analyte is a single-stranded DNA sequence fixed to a solid support, said bridging entity comprises non-naturally occurring or artificially modified DNA, said bridging entity first portion comprises a linear single-stranded polynucleotide sequence, said bridging entity first portion is covalently bound to said bridging entity second portion, and said bridging entity second portion is single-stranded and linear and comprises more than one of said nucleic acid sequences or segments.

CLAIM 543. (PREVIOUSLY PRESENTED) The composition of claim 542, wherein said signalling entities are single-stranded oligo- or polynucleotide sequences and said bridging entity first portion is capable of encoding a gene product or fragment thereof.

CLAIM 544. (PREVIOUSLY PRESENTED) The kit of claim 411, wherein said analyte is a single-stranded DNA sequence fixed to a solid support, said bridging entity comprises non-naturally occurring or artificially modified DNA, said bridging entity first portion comprises a linear single-stranded polynucleotide sequence, said bridging entity first portion is covalently bound to said bridging entity second portion, and said bridging entity second portion is single-stranded and linear and comprises more than one of said nucleic acid sequences or segments.

CLAIM 545. (PREVIOUSLY PRESENTED) The kit of claim 544, wherein said signalling entities are single-stranded oligo- or polynucleotide sequences and said bridging entity first portion is capable of encoding a gene product or fragment thereof.

Under 37 C.F.R § 1.116 (Following Their September 20, 2005 Supplemental
Amendment And The October 19, 2005 Advisory Action)]
-- October 21, 2005 --

CLAIM 546. (PREVIOUSLY PRESENTED) A kit for the detection in a sample of an analyte having one or more molecularly recognizable portions thereon, comprising as components thereof:

(i) a container carrying a molecular bridging entity comprising a first portion capable of recognizing and binding to or hybridizing with said molecularly recognizable portion on said analyte, and a second portion comprising one, or more nucleic acid sequences or segments; and

(ii) a container carrying more than one signalling entity, each such entity comprising a nucleic acid portion capable of hybridizing with said bridging entity second portion nucleic acid sequence or segment, and one or more signal generating portions, each such portion being capable of providing a detectable signal,

wherein said analyte is a polynucleotide, said one or more nucleic acid sequences or segments of said second portion are repeating low complexity nucleic acid sequences or segments, and said one or more nucleic acid sequences or segments of said second portion are incapable of hybridizing to the analyte.

CLAIM 547. (PREVIOUSLY PRESENTED) The kit of claim 546, wherein said signal is amplified because the ratio of the signalling entities to the bridging entity exceeds 5.

CLAIMS 548-552. (CANCELED).
